INTRODUCTION TO THE COMMITTEE

Continuous Crisis Committee (CCC) – SMUN 2025
Step into the eye of the storm.

Welcome to the Continuous Crisis Committee (CCC), a unique and fast-paced simulation where only one thing is constant is chaos. Time and tide wait for none, they say. CCC is the perfect embodiment of those words.

The Continuous Crisis Committee at SMUN 2025 is not your traditional SMUN experience. In this dynamic, fast-paced committee, delegates will be thrust into an evolving world of political instability, diplomatic tension, and real-time crises. With every passing hour, new developments will challenge your alliances, test your strategy, and force you to adapt or fall behind.

The CCC rewards creativity, quick thinking, and the ability to lead under pressure. With the narrative constantly shifting, one well-timed directive or secret backroom deal could reshape the entire landscape.

Are you ready to rewrite history as it happens?

INTRODUCTION TO THE AGENDA

Continuous Crisis Committee – SMUN 2025

Agenda: Regulation of Autonomous Weapons of War

The battlefield is changing, and so is war itself. In this high-stakes Continuous Crisis Committee, delegates will dive headfirst into the murky ethics, and explosive diplomacy surrounding autonomous weapons systems (AWS). An unmanned drones, AI-guided missiles, and killer robots become the new face of conflict, world powers are left grappling with a haunting question:

Who is responsible when no human pulls the trigger?

The committee will respond to real-time developments: autonomous drone strikes, civilian casualties, cyber-hacks, arms races, and the potential collapse of international law.

Expect:

- Backdoor negotiations and espionage
- Emergency sessions as crises unfold
- Press leaks, directives, and global panic
- A battle between innovation and ethics

With international peace hanging by a silicon thread, the CCC will challenge your diplomacy, critical thinking, and ability to lead when the world needs it most.

Will you control the machines, or let them control you?

BACKGROUND

August 2025- A bus filled with Ukrainian refugees in Poland is attacked by an unidentified aerial drone. 60 people are reported dead including 12 children. After an initial investigation by Polish officials, it was concluded that the drone operated autonomously.

Ukraine accuses Russia openly. Russia admits to it being their drone but denies conducting the attack suggesting that a third party is involved in this heinous crime.

The next night, another drone attack takes place but this time at the Feofaniya Clinical Hospital in Kyiv which kills 1500, injures another 300.

Survivors claim seeing objects flying in the air before hearing loud explosions. Once again, Ukraine blames Russia and Russia denies responsibility, still standing by the fact that a third party is involved.

October 2025- A swarm of Turkish autonomous drones named Kargu were shot down in the Thar desert by Indian air defence systems. India considered it an act of war by Turkiye despite Turkiye denying responsibility in sending that drone swarm.

India retaliated with failed air strikes on Turkish military bases which was followed by a swift ceasefire orchestrated by Donald Trump which India only agreed to because Turkiye claimed third party involvement by a still unknown entity.

BACKGROUND

December 2025- Xi Jinping makes the following statement “ We, the Republic of China, after
years of hard work, are proud to announce the completion of a self developed military AI software which we call Yama. We have made this in the best interest of the rest of the globe. Autonomous is the future, and we look forward to leading it.” Chinese officials released no further details about the purpose, use or implications of this software stating that it's a matter of national security raising alarms all over the globe.

One week later, India publicly shamed China
for instigating conflict with India for mocking and undermining India's religious beliefs by using
the name Yama which represents the goddess of death in Hinduism. As a response, Xi Jinping makes a Tik Tok using the song “Jatt Don’t Care” which started an internet feud between the two world leaders.

1st January 2026- At the stroke of midnight, All billboards on Times Square in NYC turned red during the new years ball drop. This caused mass panic amongst the public as they stood below, recording the whole ordeal unfold.

The following words appeared on the screen, “Be ready for what's coming ~FAT” followed by “Будьте готовы к тому, что грядет ~FAT” and then “Gelecek olana hazır olun ~FAT”. The world is taken aback as world leaders scramble to figure out what's going on. The question stands, is autonomous warfare the start of the new age? Or its end?

Always remember, the end to something always starts somewhere.

The committee begins on 2nd January 2026.
